## Recipe:

Pizza dough

## Ingridients:

600 ml of lukewarm water
$1 \times$ teaspoon of salt
$1 / 2 \times$ teaspoon of sugar
$2 \times$ tablespoons of olive oil

$1 \times$ yeast
1 kg of white flour

## Difficulty:

## General description and procedure:

- Pour lukewarm water into a bowl and add salt, sugar and olive oil.
- Add a few tablespoons of flour and crumble the yeast into the dough and mix.
- The easiest way to prepare the dough is with a food processor.
- We wait about 10 minutes for the yeast to react.
- Then we start mixing and in the meantime gradually add flour until a dough is formed that does not stick to our fingers.
- Then cover the container with a cloth and let it rise for a good half hour or until it grows to the top.
